

USE CASE

# Intelligent Knowledge Distribution

Circuit learns and understands your information on your behalf, intelligently routing changes to the right stakeholders and content — automatically.

## The Challenge

In complex supply chains, every information change creates costly ripple effects. Whether it's product specs, agreements, marketing materials, or partnerships – teams work with outdated information while organizations waste countless hours manually synchronizing updates.

## The Solution

Circuit's AI interprets and routes changes, automatically updating both stakeholders and their content automatically. From technical documentation to marketing materials, all information stays synchronized across your entire network.

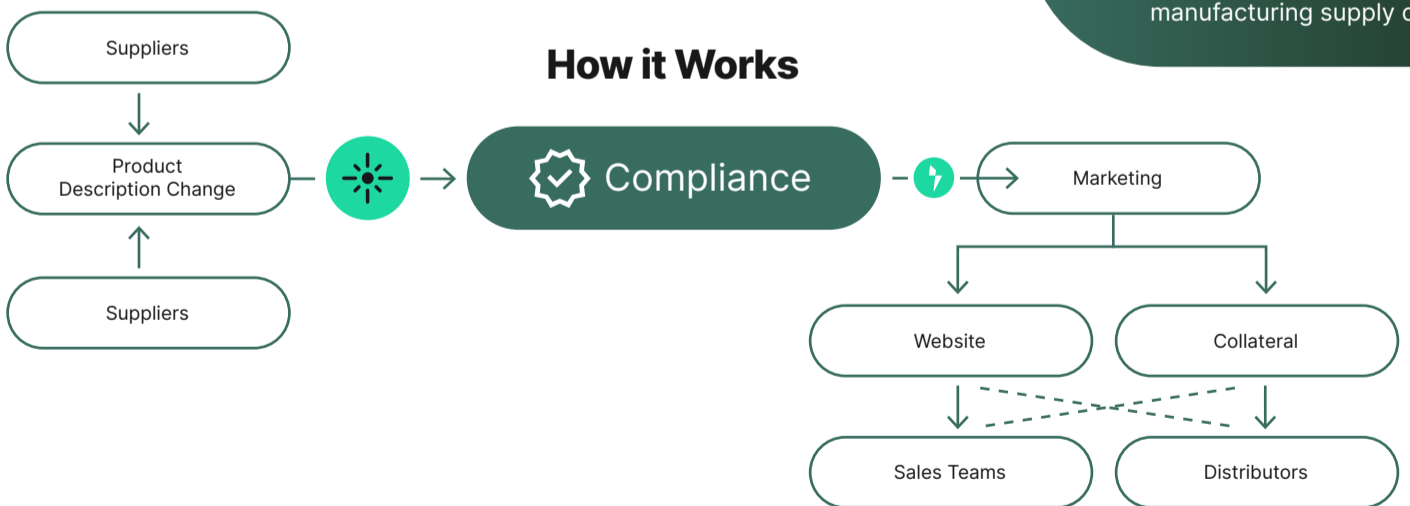

## The Impact

Teams shift from managing outdated information to driving value. Critical changes reach every stakeholder instantly, maintaining consistency and eliminating costly errors across the ecosystem.

**85%**  
reduction in time spent updating stakeholders and documents

**92%**  
fewer instances of outdated information in circulation

**2.4M**  
annual savings from error prevention in typical manufacturing supply chain

## About Circuit

Headquartered in Austin, Texas, and led by former Silicon Labs CEO Tyson Tuttle, Circuit is building the world's first AI-powered knowledge network. Circuit's mission is to develop a new network for knowledge workers to transform static information into living content in order to be more productive. By connecting ideas, data, and people in real-time, Circuit empowers individuals and organizations to make faster, smarter decisions, enhance collaboration, and drive meaningful progress.
